## Jani-King's COVID-19 Infection Prevention Process

*We are pleased to announce that Jani-King's Infection Prevention System allows us to offer disinfection service options to our clients, whether it be preventative or remedial.*

### How We Can Help

#### Cleaning vs. Disinfecting

All surfaces will need to be **cleaned prior to disinfecting**. If cleaning is needed, there will be an additional cost. For new clients, Jani-King will prepare a quote to clean your facility.

Cleaning is accomplished by physically wiping surfaces to clean and remove visible soils.

Disinfecting kills viruses on surfaces or objects. Disinfecting works by using EPA registered chemicals to wet surfaces and allowing contact/dwell time to kill the virus in compliance with CDC guidelines.

Jani-King International has long term relationships with multiple partners where our disinfectant programs have been developed.

#### Why Our Experience Matters

Jani-King International has been a leader in the cleaning industry for over 50 years and has developed comprehensive programs to address proper cleaning and disinfection in settings where antibiotic resistant pathogens have developed.

Our expertise in disinfecting programs include proper training & equipment and is adaptable to all work and public environments. Jani-King has experience in applying its disinfection programs to hospitals, casinos, office buildings, schools and other venues during an outbreak of a seasonal flu virus or other communicable diseases.

Jani-King is ready and able to assist customers that need disinfecting services.
